

Our Client, a major High Street Bank, negotiated with us to reclaim this redundant site, put in the necessary infrastructure and build them a complete computer back-up centre as a safeguard against the loss of the main computer systems.

Phase I comprised 2000 sq. metres plus infrastructure and was completed within a tight 20 week period.

Subsequently we returned to the site to build a further facility required due to the expansion of their works.

The second phase was to construct a 2050 sq. metre computer hall fully services and protected. Phase II was completed in 28 weeks as a full design and build contract and included further infrastructure works.

Our Client has requested no publicity or photographs due to the nature of the facility.

Client	High Street Bank
Value	Phase I £2.5m Phase II £3.0m
