

The construction of a high-tech teaching facility within the grounds of an existing Grade 1 listed property, was the initial requirement from Ashridge Management College in the extension and development of their facilities at Berkhamstead. The project included teaching space, breakout areas and two floors of student accommodation.

As well as restrictions imposed by the Planning and Statutory Authorities, there were physical restrictions on the site to be overcome, particularly regarding the woodland area, the sloping site and the need to meet the requirements for the continuity of the College's everyday working environment.

The sloping site allowed for basement construction for service facilities and the crescent shape of the building and the round towers were designed to reflect particular details from other structures within the college.

Client	Ashridge Management College
Value	£2.5 million
Consultants	Derek Rogers Associates Robert Tucker Associates
Duration	52 weeks
